

Plan Ahead with HJ Pre Dock Inspection (PDI)

Proactive support for smarter maintenance planning

At HJ Lubricators, we believe that informed decisions start with quality insight. Our Pre Dock Inspection (PDI) is a proactive service designed to give you as shipowners or operators a clear overview of the condition of your HJ lubrication system — typically offered ahead of a scheduled dry dock.

HJ Lubricators PDI allows both our team and you to prepare for upcoming service tasks, spare parts planning, and general maintenance. It ensures that the correct parts are at hand, and that maintenance is efficient and cost-effective.

As part of the inspection, we check and recommend critical spare parts to be kept on board — helping you limit downtime in the event of a sudden breakdown.

Why Choose HJ Lubricators PDI?

- Plan service and spare parts ahead of time
- Minimise dry dock delays
- Ensure full compatibility of components
- Reduce total cost of ownership
- Build the foundation for a long-term service partnership
- Reduce operational risk with the correct spares onboard

Secure your PDI well in advance of your next dry dock. Contact your local HJ Lubricator Service representative to schedule your inspection.
